SUMMARY

Electronics & Computer Engineering undergraduate with hands-on experience across two domains: IoT & full-stack systems development, and high-scale event operations & program management. Built real-world technical systems (FuelShield, Sanjivani AI) while leading national-level hackathons with 1,000+ participants, managing artist logistics for SPIC MACAY, and heading college-level technical events end-to-end. Recognized for building structured frameworks — whether evaluation rubrics for hackathon judging or firmware architectures for embedded systems — and for executing reliably under pressure at the intersection of technology, operations, and people.

EXPERIENCE

Executive Head

BotBuddies Community — Under S2P Robotics Pvt. Ltd. & Nextech Minds

03/2025 – 08/2025
Chh. Sambhajinagar

- Led a multidisciplinary student community focused on robotics, IoT, and applied engineering. Designed and executed technical workshops, project showcases, and collaborative learning programs.
- Headed end-to-end planning and execution of national-level hackathons:
- InnoHack 2025 – CSMSS College of Engineering: Managed 50+ teams (250+ participants), overseeing registrations, judging flow, mentorship coordination, and logistics.
- InnoHack 2.0 – VIT Pune: Executed a large-scale hackathon with 250+ teams (1,000+ participants). Designed multi-stage judging systems, mentor onboarding, evaluation criteria, and on-ground event operations.

Event Head

ECESA – Electronics & Computer Engineering Students Association

10/2024 – 08/2025
MIT College of
Engineering, Chh.
Sambhajinagar

- Led planning and execution of TechnoSpark 2.0 — college-level technical project presentation event with 60+ participating teams.
- Took end-to-end ownership of event structuring, scheduling, on-ground execution, and post event review.
- Designed standardized judging rubrics, evaluation sheets, and reviewer guidelines ensuring fair and transparent assessment.
- Acted as the single coordination point between faculty judges, volunteers, and student teams. Managed logistics, stage operations, and participant handling under strict timelines.

Cultural Secretary

IETE Students Forum

10/2024 – 08/2025
MIT College of
Engineering, Chh.
Sambhajinagar

- Organized and hosted 5+ interdisciplinary programs including Drone & Robotics Training, IoT & VLSI Fundamentals Bootcamp, and Raspberry Pi Hands-on Workshop.
- Collaborated with multiple student forums and academic departments to drive interdisciplinary participation.
- Managed event themes, performances, logistics, and budgeting with end-to-end ownership.

Coordinator

Kalavihangam — Institution's Flagship Cultural Festival

02/2025 – 03/2025
MIT College of
Engineering, Chh.
Sambhajinagar

- Managed backstage operations and artist coordination for the institution's flagship cultural festival.
- Oversaw performance scheduling, stage transitions, and technical readiness for multiple live acts.
- Coordinated with performers, technical teams, and volunteers to maintain smooth event flow under strict time constraints.

Head of Hospitality & Audience Management

SPIC MACAY – Virasat 2024 (Bansuri Concert featuring Pt. Ronu Majumdar)

02/2024 – 02/2024
Ahmednagar – Chh.
Sambhajinagar –
Nashik

- Led end-to-end hospitality and audience management across multiple venues including MIT College of Engineering and ZP High School, Sudamwadi.

- Managed complete artist logistics — pickup in Ahmednagar through inter-city travel to drop-off in Nashik, covering accommodation, transport, scheduling, and venue transitions.
- Managed audience flow and on-ground operations for concerts attended by 1,600+ audience members.
- Delivered zero-delay execution under tight timelines while upholding SPIC MACAY's values of dignity, respect, and cultural responsibility.

EDUCATION

Bachelor of Technology in Electronics and Computer Engineering

08/2022 – Present

MIT College of Engineering, Aurangabad

SKILLS

Embedded Systems & IoT

ESP32, ESP8266, C/C++ (Arduino framework), MQTT, HTTP/REST, GSM/GPRS, Wi-Fi, real-time data acquisition, sensor interfacing, actuators

Full-Stack Development

React, Next.js, Tailwind CSS, Node.js, Firebase (Auth, Firestore, Realtime Database, Cloud Functions), Flutter, REST APIs

Event Operations

Event planning & logistics, judging framework design, team leadership, vendor coordination, artist & hospitality management, stakeholder management

AI & Data

Machine learning model integration, image classification, data preprocessing, data visualization

Tools & Platforms

Git & GitHub, Notion, Excel, Firebase, Blynk, Netlify, CI/CD workflows, Digital Marketing (SEO, SMO, SEM)

PROJECTS

FuelShield – Fuel Monitoring & Theft Detection System

IoT | Embedded Systems | Full-Stack

- Designed and developed a real-time fuel monitoring and theft detection system for vehicle security and fuel misuse prevention.
- Built the embedded layer on ESP32 using ultrasonic sensing; integrated GPS tracking and GSM alerts for unauthorized access and abnormal fuel drops.
- Implemented MQTT + Firebase for real-time hardware–cloud synchronization.
- Developed a React/Next.js dashboard and Flutter mobile app for live monitoring and alerts. Addressed real world constraints including latency, power stability, and network reliability.

Smart CRM – Enterprise Excel Automation System

Business Automation | High-Performance Data Processing

- Built an enterprise-scale CRM automation system in Excel processing 100,000+ B2B leads per session.
- Replaced UI-driven workflows (~500/day) with RAM-based batch processing, reducing runtime from ~40 min to ~45 seconds.
- Implemented in-memory VBA Variant Array processing; developed enterprise-grade validation achieving 99.9% deliverability.

IoT-Based Smart Door Locking System

Embedded Systems | IoT Security | Real-Time Systems

- Designed a multi-layer IoT security system with biometric, PIN, and mobile app authentication.
- Built an interrupt-driven architecture on ESP8266 achieving sub-300ms response latency; implemented WebSocket-based real-time sync via Blynk IoT.
- Developed a 3-strike autonomous lockdown mechanism with instant alerts and watchdog timer firmware for reliability.

Sanjivani 2.0 – AI-Powered Assistance System

AI Integration | System Design | Applied Automation

- Worked on an AI-powered assistance system focused on real-world decision support; integrated AI components into end-to-end application workflows.
- Designed response flows emphasizing reliability, latency, and user interpretability — treating AI as a system component rather than a standalone model.
